Let's Track the Sun!

Vernal Equinox Gnomon Celebration

with Astronomer Tony Hull

March 23 10-3

Bring small stones to mark the sun's path

Twice a year, on the Equinoxes, seeing the straight line of stones created to mark the Gnomon's shadow is special indeed and quite different from other days of the year. The placing of stones to create this pattern will continue approximately every 20 minutes throughout the day. Join us at any time. You are encouraged to bring a few special small stones.

(2"-3" in diameter)
